NETWORK-Drivers:																																												
Compatibility code																																												
TCP/IP																																												
TLS																																												
TPM-Middleware (URB):																																												
Compatibility code																																												
Web services																																												
Call-in (providing)																																												
Call-out (consuming)																																												
Client Certificate support using SSL																																												
Java Call-in																																												
COM																																												
Web Functionality:																																												
Compatibility code																																												
Web Application Server																																												
DSP support																																												
UHTTP component (unicode) ++																																												
SMTP/POP3																																												
Web Request Dispatcher (Servlet) *																																												
Uniface Functionality:																																												
Compatibility code																																												
Uniface Virtual Machine																																												
Remote Data Access																																												
Remote Application Invocation																																												
Graphical Development Environment																																												
Character Mode Deployment Environment																																												
Development Environment																																												
Source Code Control Interface (SCCI)																																												
Uniface Dispatchers																																												
Native graphical printing																																												
Enterprise graphical printing																																												
Enterprise/Decode																																												
Localization support (CLDR 1.0)																																												
Localization support (CLDR 30.0.2)																																												
XML Parsing																																												
XML Namespace Support																																												
HTML Widget (CEF) (+++)																																												
Miscellaneous Interfaces:																																												
Compatibility code																																												
Java JRE 1.6 (32-bit)																																												
Java JRE 1.7																																												
Java JRE 1.8																																												
OpenJDK 8																																												
Java JRE/OpenJDK 11																																												
Uniface Anywhere 4.8.2 and 5.0 (+)																																												
Pathscrambler																																												
Application distribution																																												
WEB browsers																																												
Compatibility code																																												
Firefox 15 and higher																																												
Chrome 21 and higher																																												
MS Internet Explorer (IE) (32-bit)																																												
MS Internet Explorer 7 (USP only)																																												
MS Internet Explorer 8 / 9 / 10 / 11																																												
Mobile Functionality:																																												
Compatibility code																																												
Mobile Application Server																																												

Notes:
 S = Supported with GA version Functionality has been verified
 S = Supported with E-distribution S
 S1 = (supported from MG02) SDK 15.0 is not supported for Windows 10. SDK 15.7 SP137 is the newest release and is officially supported on Windows 10.
 S2 = (supported from MG02) For Windows 10 you need to use SDK 16.0 SP02 PL02 or higher.
 S3 = Supported from DB2 10.1.0.4 or later.
 * The WRD is built using Java 8 targeting JRE 6 or higher and is verified using Tomcat 8. It requires a Java EE compliant web server that supports Servlet API, versions 2.3 through 3.1, using Java 6 or higher, preferably using the latest update of Java 8. For TLS connection with Uniface Router Java 8 or higher is required.
 (+) The Uniface Anywhere product itself is not part of the distribution; mentioned versions are current at release time of this Uniface release
 (++) Unicode enabled - import signature and recompile calling component(s) (see release notes)
 (+++) CEF: Uniface htmlwidget uses the CEF branch v3.2454.1344 (as of G303) with the corresponding chromium version 45.0.2454.26.
NOTES:
Virtualization technologies: Uniface does not explicitly test or certify products running in virtual environments. More details are available on Uniface.info.
Web browser Versions: The versions of web browsers listed are the versions we have used for verification purposes. We will provide support for browser versions which are generally available in the marketplace (and supported by the supplier). More details are available on Uniface.info
Uniface 64-bit client support is for deployment. More details are available on Uniface.info
