

Uniface Technical Support: Uniface 10.2.01 Patch F104 available for LIB, LU6, RSD, SO9, W32 and W64

Uniface 10.2.01 Patch F104 available for LIB, LU6, RSD, SO9, W32 and W64

Author: daniel.iseli@uniface.com (diseli)

Updates for F104	
Issue Number	Description
31276	The behavior of the grid widget when retrieving additional occurrences has been corrected, so the assignment setting \$GRID_READALL_ON_STORECOMPLETE is obsolete. Note: Always use a stepped hit list when working using the grid widget. If the step size is 0, the hit list is completed and all occurrences are loaded into the grid. This can dramatically reduce performance.
-	When using Oracle for the Uniface IDE and the Uniface Repository, it is recommended that you configure the ORA connector to allow 150 to 250 open cursors. If you use the disable cache option for the Uniface IDE, you can limit the resulting performance decrease by using cursor caching on the server side. Tune the Oracle server by configuring the SESSION_CACHED_CURSORS parameter.
