

About Google App Maker

(Original creator: ming)

I attended the [Google Cloud Next 17](#) event in Amsterdam recently. There were several sessions I was interested in. One of these was “Extending G Suite functionalities with Business Applications” and the speaker was Lee Boonstra. Here is an overview of the other [technological highlights](#).

The session gave an introduction to the new product “Google App Maker”. App Maker is a low-code application development tool that lets your organization build and deploy custom apps easily and securely, on the same platform that powers G Suite. The interesting thing is that, similar to Uniface, this App Maker is also a **model-driven style** development workbench. Of course, it is cloud-based. And it embraces [application development](#). The official App Maker site is: <https://developers.google.com/appmaker/>. Currently, App Maker is still in preview stage. By the remark on the site: “G Suite Business customers can preview App Maker. Ask your domain admin to apply for early access”. But you can watch [this introduction video from YouTube](#).
